The Access-Productivity Gap

Think access doesn’t impact productivity and security? Think again.

52% of development teams have missed deadlines because they were stuck waiting for access
52% of teams reported being held accountable for missed deadlines, even when they couldn’t access infrastructure

53% of organizations have their productivity impacted on a weekly – or daily – basis because of access issues
64% of respondents have services or databases they can’t access in 5 minutes or more

Why does this matter?
61% of all breaches involved credentials used to gain access

Fixing the Gap: People-First Access

Fixing these issues surprisingly simple: make access as simple as possible for the humans that need it. What happens when you do that?

Healthcare Organization

Improving Access by Demoting a VP
- Suppressed VP with a junior role as access admin, eliminating the need for the VP
- Reduced support requests by 90% by action of limited access to senior VP
- Significantly reduced escalation and their impact on IT, and governance teams

Estimated Savings
$3M

Financial Services Company

Achieving “Security by default”
- Automating “Phase 1” by default
- Reduced the number of accounts for dictionary attack
- Increased the number of accounts for accounts used to escalate privilege

Estimated Savings
$1.3M

Global Technology Company

Reducing Admin Access for Wind
- Reduced the number of employees with administrative access across all orgs
- Decreased number of breaches
- Improved overall security

Estimated Savings
$262K
